

Networked Nurse Call for the Most Popular Step-Saving Options

Linking all nursing areas together as a unified Provider 790 Nurse Call network supports a single point of integration for the most popular and step-saving options including:

Wireless SIP Phone Integration

Routes patient calls directly to their caregiver's mobile phone; caregivers remain mobile and able to respond to calls

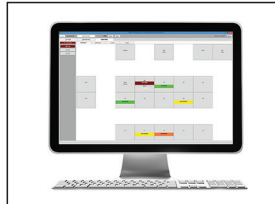

Smartphone & Pager Messaging

Cost effective choices for receiving facility-wide text alerts of active patient and staff calls. Call notifications route to assigned caregivers or teams' smartphones or pocket pagers

PC Console Activity Display

A real-time activity display available on any networked computer within the facility, allowing staff and managers to monitor Nurse Call activity and workflows in their area or across the entire facility

Automated Overhead Paging

Interfaced to the public address system, high priority patient calls announce over paging speakers to alert caregivers to the events

Real-Time Locating

Integrated with the most popular staff locating systems; caregivers automatically register into rooms so staff can easily find each other without disruptive overhead paging

Smart Bed

Monitor and alert staff to changes in the bed that affects the patient including the Fowler position, bed side rails down, brake set, and bed exit alarm

Interactive Television

A single patient device for Nurse Call television control, lighting control, and patient engagement/education

Cross Platform Integration

By sharing the same Nurse Call network, the Provider 790, 700, and 680 platforms can all work together as a unified solution

A Complete Life-Safety Solution

Provider 790 Nurse Call System with integrations gives you a complete communications, alerting, rounding, and workflow solution for a nursing unit, single building, or a multi-building campus. Explore the full breadth of Provider 790 staff and patient room components, LAN accessible software, and integration options to create a custom solution tailored to your facility
